## PROJECTS

---

### Laptop Price Prediction.

- Developed a Machine Learning web app using streamlit to predict the price of a laptop based on its specifications. The app uses a random forest regressor model and has an R2 score of 89.
- Modules used- streamlit, sklearn, pickle, matplotlib, seaborn.

### Gesture Recognition on software control.

- This project helps to control software like media player, powerpoint presentation using hand gesture. The goal of this research is to create a system that can recognize hand gesture and use them as an input command to connect with a computer.
- Technologies used- Opencv, Pyautogui, Tensorflow, Python.

### Personal Portfolio.

- Develop a modern, responsive website that showcase my educational background, achievements, skills and projects.
- Technologies used- HTML, CSS, and Javascript.

## POSITIONS OF RESPONSIBILITY

---

### Co-ordinator in camps of whoishusain

- Organized and participated in various seminars and events.

### Co-ordinator in Tech club, St. Clare's School

- Managed club activities and designed various posters.
- Participated in various extracurricular activities and inter-school competitions.
